

Use Case Name: Testimonial Page

Summary: What each actors can view and do for testimonial page.

Actors: Client, Administrator

Precondition: Both actors are able to open the program and has clicked on the testimonial tab.

Description:

- View Testimonial List - The actors can see the list of the testimonial on the left side of the screen. Each time a new testimonial is added, the screen will refresh with updated version of the list that has the new testimonial added.
- Adding Testimonials - The actors can enter in the dialog box the name, number of stars, and a review of the product. Once those are entered in, the actor will then press the submit button. A message will popup saying the testimonial has been accepted and the screen will then refresh with the newly added testimonial that was just submitted.
- Edit Testimonial - This is a task only the administrator can do which is editing the testimonial list. There will be a button for editing that only will show up on the screen if the user administrator is logged in. The administrator will click on the button and a new screen will pop up with the testimonial list. The administrator can then edit the list the same way as editing a text file. Once the editing is done, the administrator will then click on the done editing button. The page will refresh again with the edited version of the testimonial list on the screen.
